A Case Of Ganglion Of Wrist treated With RUTA GRAV (Homeopathy)

A 25 yr old male came with a 2-inch diameter ganglion on dorsum of left wrist. There was no history of injury or any other reason for the ailment (i.e no precipitating cause). He had a wart like eruption on the foot, near left big toe. He was given RUTA 1m / 3 doses to be taken 10 days apart. A follow up 3 months later revealed that the wart like eruption fell off one morning leaving a scar which healed completely and ganglion becoming progressively smaller till date.

Explanation

Ruta graveolens is a very common remedy to treat ganglion like condition of wrist. It was chosen in this case not only for this reason but also because the patient had a wart like eruption on the foot, which became an important concomitant. {flat warts (Boger Synoptic Key)}
